## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on October 18, 2007 has been entered.

### ***Response to Arguments***

2. Applicant's arguments with respect to claims 1 and 11-12 have been considered but are moot in view of the new ground(s) of rejection.

### ***Double Patenting***

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

4. Claims 1 and 11-12 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 8 and 13 of copending Application No. 10/130,694 in view of Lucas (US 4,652,903).

In considering claim 1, claims 8 and 13 of copending Application No. 10/130,694 disclose all the limitations of the instant invention except for providing the claimed time-base compression part operable to time-base-compress an audio signal employing a video sampling clock and indicates an area of a synchronizing period of the video signal where the time-based-compressed audio data is located in the generated video/audio multiplexed signal. Lucas teaches that the multiplexer 114 which compresses four channels of delta-modulated audio using 455 fH generated from a single master clock, which also is used for sampling the video signal (multiplexer 114 of Fig. 4 and Fig. 5, col. 6, lines 13-23 and lines 39-55), and the multiplexer 118 receiving four sets of signals, luminance, chrominance, audio, and synchronization, timing and teletext to multiplex video, audio and teletext data based on VBI (multiplexer 118 of Fig. 4, col. 6, lines 25-38).

Therefore, it would have been obvious to one ordinary skill in the art at the time of the invention to incorporate the multiplexers 114 and 118 as taught by Lucas into claims 8 and 13 of copending Application No. 10/130,694's system in order to sharply reduces the cost of the equipment which must be used at each receiver.

In considering claim 11, the claimed wherein the control signal includes a horizontal synchronizing signal and a video synchronizing signal is met by the VBI disclosed in col. 6, lines 25-29 and shown in Fig. 4 of Lucas.

In considering claim 12, the claimed wherein the signal multiplexing part is operable to multiplex the time-base-compressed audio and the video signal when the control signal is a certain value is met by the multiplexer 118 combining the signals by selecting them at **the appropriate time** for inclusion in the MAC video line (multiplexer 118 of Fig. 4, col. 6, lines 25-38 of Lucas).

This is a provisional obviousness-type double patenting rejection.
